Package 'interactiveDisplayBase'

February 28, 2026

Type Package

Title Base package for enabling powerful shiny web displays of
Bioconductor objects

Version 1.48.0

Date 2021-07-30

Imports shiny, DT

Depends R (>= 2.10), methods, BiocGenerics

Suggests knitr, markdown

Enhances rstudioapi

Description The interactiveDisplayBase package contains the the basic
methods needed to generate interactive Shiny based display
methods for Bioconductor objects.

License Artistic-2.0

Collate interactiveDisplayBase.R dataframe.R dot_runApp.R zzz.R

VignetteBuilder knitr

biocViews GO, GeneExpression, Microarray, Sequencing, Classification,
Network, QualityControl, Visualization, Visualization,
Genetics, DataRepresentation, GUI, AnnotationData, ShinyApps

RoxygenNote 7.1.1

PackageStatus Deprecated

Contents

.runApp   *Run a shiny app, capturing results to the R session*

Description

This utility function launches a shiny visualization application, either in the RStudio viewer pane (if run under RStudio) or in the browser.

Usage

```
.runApp(app, ...)
```

Arguments

app   The shiny application definition, see ?shiny::runApp.

...   additional arguments passed to shiny::runApp().

Value

The return value of shiny::runApp.

Author(s)

Martin Morgan

Examples

```
if (interactive()) {
    require(shiny)

    app <- list(
        ui = fluidPage(
          title="Who Am I?",
          sidebarLayout(
            position="left",
            sidebarPanel(
                h1("Your name"),
                textInput("your_name", "Your name?", "Anonymous"),
                actionButton("done", "Done")),
            mainPanel(
                "Hi", textOutput("your_name", inline=TRUE))
            )),

        server = function(input, output) {
            output$your_name <- renderText(input$your_name)
            observe({
                if (input$done > 0)
```

```
                    isolate(stopApp(returnValue = input$your_name))
            })

        })

    .runApp(app)
}
```

---

display	*display: Open a Shiny application for a Bioconductor object*

Description

This opens a shiny visualization application in the browser based on the submitted object.

Usage

```
display(object, ...)
```

Arguments

object	data object to display
...	additional arguments passed to methods; currently unused.

Value

Usually some variation of the initial input object, but it may be altered by the display widget (subset for example).

Author(s)

Shawn Balcome and Marc Carlson

Examples

```
if(interactive()) {

## draw a data.frame
display(mtcars)

## subset a data.frame:
mtcars2 <- display(mtcars)

}
```
