msqc1-package	*Sigma mix MSQC1 data*

Description

The data set contains an eight technical replicate data set and a three replicate dilution series of the MS Qual/Quant QC Mix standard sample (Sigma-Aldrich, Buchs, Switzerland) measured on five different mass spec platforms at the Functional Genomics Center Zurich.

Details

To obtain the MSQC1 stock solution, MS Qual/Quant QC Mix (Catalog #: MSQC1, Lot # 081M6281) was purchased from SigmaLAldrich (Buchs, Switzerland).

The first sample `msqc1_8rep` is based on eight techniqal replicates. To derive a complex sample matrix, 10 mul of MSQC1 working solution was mixed with 10mul (approx 10 mug) tryptic yeast digest (Saccharomyces cerevisiae), 1mul iRT peptide stock solution (Biognosys, Schlieren, Switzerland), and 19 mul 0.1% FA. This sample is denoted as standard sample.

The `msqc1_dil` sample was derived from a six point dilution series containing relative MSQC1 amounts of 0.025, 0.05, 0.2, 1, 2, and 5 with respect to the standard sample. The amount of yeast digest and iRT peptides was kept constant across all dilution steps. The reference L:H ratio vs. the on column amount of SIL peptide can be found in the data set `peptides`.

Both samples were meassured on five mass spectrometers. The mass spectrometers and operation modes are:

- `QTRAP` (ABSciex, Concord, Canada) - SRM mode
- `TSQvantage` (ThermoScientific, Bremen, Germany) - SRM mode
- `Qexactive` (ThermoScientific, Bremen, Germany) - PRM mode
- `QExactiveHF` (ThermoScientific, Bremen, Germany) - DIA mode
- `TRIPLETOF` 5600 (ABSciex, Concord, Canada) - SWATH and MS1 mode

All Raw LC-MS data from all platforms were imported into Skyline 3.1 (doi: 10.1093/bioinformatics/btq054). A single expert user adjusted the automatic peak group selection and integration border positioning (skyline legacy peak scoring).

The data were exported from skyline as csv files and included in this package as `data.frame` in RData files.

user a factor with levels algorithm_1 algorithm_2 algorithm_3 user_1 user_2 user_3 user_4
user_5 user_6

attempt a factor with levels beginner expert legacy mProphet second_best

Details

The data were derived by a user study. Therfore each individual was given a skyline document containing the dilution series data recorded on the QTRAP and TripleTOF 5600. Starting from skyline legacy results, users curated the data.

In addition, two mProphet doi: 10.1038/nmeth.1584 models (as implemented in skyline) were trained on the 8 replicate data from the same instrument.

Value

A `data.frame` and `msqc1` S3 object.

Examples

```
data(msqc1_userstudy)
## maybe str(msqc1_userstudy) ; plot(msqc1_userstudy) ...
```

---

peptides   *sigma mix peptides*

Description

This table contains msqc1 peptide proberties.

Usage

```
data("peptides")
```

Format

A data frame with 14 observations on the following 5 variables.

Peptide.Sequence a factor with levels ALIVLAHSER AVQQPDGLAVLGIFLK EGHLSPDIVAEQK ESDTSYVSLK FEDENFILK FSTVAGESGSADTVR GAGAFGYFEVTHDITK GGPFSDSYR GYSIFSYATK NLSVEDAAR SADFTNFDPR TAENFR VLDALQAIK VSFELFADK
