

# Package ‘RedeR’

September 24, 2012

**Type** Package

**Title** Bridging the gap between hierarchical network representation and functional analysis.

**Version** 1.2.5

**Date** 2012-08-18

**Author** Mauro Castro, Xin Wang, Florian Markowetz

**Maintainer** Mauro Castro <mauro.a.castro@gmail.com>

**Depends** R (>= 2.15), igraph0, RCurl, XML, XMLRPC

**Imports** rJava, methods

**Suggests** PANR, HTSanalyzeR, pvc lust, graph

**biocViews** GraphsAndNetworks, Visualization, GUI

**Description** RedeR is an R-based package combined with a stand-alone Java application for dynamic network visualization and manipulation. It implements a callback engine by using a low-level R-to-Java interface to build and run common plugins. In this sense, RedeR takes advantage of R to run robust statistics, while the R-to-Java interface bridges the gap between network analysis and visualization: for R Developers, it allows the development of Java plug-ins exclusively using R codes; for Java Users, it runs R methods implemented in a stand-alone application, and for R Users RedeR interactively displays R graphs using a robust Java graphic engine embedded in this package.

**License** GPL (>= 2)

 addEdgeBetweenContainers

*Add edges between containers.*

---

### Description

Method to add edges between RedeR containers. This method adds non-nested assignments, in contrast to the default behavior that builds nested associations to-and-from containers.

**Usage**

```
addEdgeBetweenContainers(obj, containerA, containerB )
```

**Arguments**

```
obj           Object of RedPort Class.
containerA    <string>
containerB    <string>
```

**Value**

Add graph objects.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
el<-matrix(c('n1','n2','n3','n4'), ncol=2, byrow=TRUE)
g <- graph.edgelist(el)

## Not run:

callD(rdp)
addGraph( rdp, g, layout.kamada.kawai(g) )
nestNodes( rdp, c('n1','n2') )
nestNodes( rdp, c("n3","n4") )
addEdgeBetweenContainers(rdp, "N0", "N1")
updateGraph(rdp)

## End(Not run)
```

---

addEdges

*Add edges to RedeR graphs.*

---

**Description**

Add edges to an active RedeR session.

**Usage**

```
addEdges(obj, edges)
```

**Arguments**

obj                    Object of RedPort Class.  
edges                   Edge sequence as an array <array of strings>.

**Value**

Adds the specified edges to the graph.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)

## End(Not run)
```

---

addGraph

*Add graphs to RedeR application.*

---

**Description**

Method to wrap R graphs into RedeR objects and send it to RedeR app.

**Usage**

```
addGraph(obj, g, ...)
```

**Arguments**

obj                    Object of RedPort Class.  
g                        An igraph object.  
...                     Additional arguments passed to RedeR application.

## Details

Additional arguments:

- layout** Vertex coordinates (graph layout). Accepts matrix with 2 cols (i.e. x and y coords) <matrix>.
- gscale** Expansion factor of the graph area related to the app panel area (default = 75) <numeric>.
- zoom** Sets the zoom scale for the app panel (range: 0.0 to 100.0; default = 100.0) <numeric>.
- gcoord** Sets the graph x,y center. Coords between 0 and 100 are set to the visible area of the app panel (default = c(50,50)) <numeric vector>.
- isNest** Logical value, whether to nest all nodes into a new container (default = FALSE). See additional args in [nestNodes](#)
- isAnchor** If isNest=TRUE, this logical value sets whether to anchor the container in dynamic layouts (default = TRUE).
- isAssign** If isNest=TRUE, this logical value sets whether to assign the container name to the nested nodes (default = FALSE).
- loadEdges** Logical value, whether to send edges to RedeR app (default = TRUE).
- theme** Some pre-defined nest attributes. Options: 'tm0', 'tm1', 'tm2', 'tm3', 'tm4', 'tm5', 'tm6' <string>. Alternatively, it can be a list with customized attributes.
- ntransform** Logical value, whether to transform nodes in containers (default = FALSE).
- parent** ID of a container already available in the app <string>. Nodes from g will be nested to this container.

## Value

Submits R graphs to RedeR app.

## Attributes passed by the igraph object

### Graph attributes:

- bgColor** Sets the background color of the app panel <hexadecimal>.
- zoom** Sets the zoom scale for the app panel (range: 0.0 to 100.0) (Default=100) <numeric>.
- gscale** Expansion factor of the graph area related to the app panel (range: 0.0 to 100.0) (Default=100) <numeric> (PS. alternative entry to the 'gscale' argument above).
- coordX** Sets the graph x center; x between 0 and 100 sets to visible area <numeric> (PS. alternative entry to the 'gcoord' argument above).
- coordY** Sets the graph y center; y between 0 and 100 sets to visible area <numeric> (PS. alternative entry to the 'gcoord' argument above).
- loadEdges** Logical value, whether to send edges to RedeR app (Default=TRUE) (PS. alternative entry to the 'loadEdges' argument above).
- isNest** Logical value, whether to nest all nodes into a new container (Default=FALSE) (PS. alternative entry to the 'nest' argument above).
- isAnchor** If isNest=TRUE, this logical value sets whether to anchor the container in dynamic layouts (Default=FALSE).
- isAssign** If isNest=TRUE, this logical value sets whether to assign the container name to the nested nodes (Default=FALSE).
- nestColor** If isNest=TRUE, this attribute sets the 'color' of the new container <hexadecimal>.
- nestAlias** If isNest=TRUE, this attribute sets the label of the new container <string>.

**nestFontSize** If isNest=TRUE, this attribute sets the size of the container label (Default=12). <numeric>.

**nestFontColor** If isNest=TRUE, this attribute sets the 'color' of the container label <hexadecimal>.

**nestFontX** If isNest=TRUE, this attribute sets the x position of the label related to the container (Default=-8) <numeric>.

**nestFontY** If isNest=TRUE, this attribute sets the y position of the label related to the container (Default=-8) <numeric>.

**nestShape** If isNest=TRUE, this attribute sets the shape of the container, options: <'ELLIPSE'> and <'ROUNDED\_RECTANGLE'> (Default= ELLIPSE).

**nestSize** If isNest=TRUE, this attribute sets the size of the container (Default=NULL) <numeric>.

**nestLineWidth** If isNest=TRUE, this attribute sets the line width of the container, options: >= 0 (Default=1.0) <numeric>.

**nestLineColor** If isNest=TRUE, this attribute sets the line color of the container <hexadecimal>.

**nestImage** If isNest=TRUE, sets the status of the container on the screen: <'plain'>, <'transparent'>, or <'hide'> (Default= plain).

**nestLineType** If isNest=TRUE, this attribute sets the line type of the container: <'SOLID'>, <'DOTTED'>, <'DOTTED\_SHORT'>, <'LONG\_DASH'> (Default='SOLID').

#### Vertex attributes:

**name** Node attribute 'name' <string>.

**nodeAlias** Node attribute 'alias' <string>.

**nodeBend** Node attribute 'bend', options: 0-100% (Default=50) <numeric>.

**coordX** Node attribute 'x coord' (Default=random coord) <numeric>.

**coordY** Node attribute 'y coord' (Default=random coord) <numeric>.

**nodeSize** Node attribute 'size', options: > 0 (Default=20) <numeric>.

**nodeShape** Node attribute 'shape', options: 'ELLIPSE', 'RECTANGLE', 'ROUNDED\_RECTANGLE', 'TRIANGLE', 'DIAMOND' (Default= ELLIPSE) <string>.

**nodeColor** Node attribute 'color', e.g. "#ff0000" for red <hexadecimal>.

**nodeWeight** Node attribute 'weight', options: >= 0 (Default=0) <numeric>.

**nodeLineWidth** Node attribute 'line width', options: >= 0 (Default=1) <numeric>.

**nodeLineColor** Node attribute 'line color', e.g. "#ff0000" for red <hexadecimal>.

**nodeFontSize** Node attribute 'font size', options: >= 0 (Default=12) <integer>.

**nodeFontColor** Node attribute 'font color', e.g. "#ff0000" for red <hexadecimal>.

#### Edge attributes:

**arrowDirection** Edge attribute 'arrow direction', Options: 0 (A-B), 1 (A->B), 2 (A<-B) or 3 (A<->B) (Default=0) <integer>.

**edgeWeight** Edge attribute 'weight', options: >= 0 (Default=0.0) <numeric>.

**edgeWidth** Edge attribute 'width', options: >=0 (Default=1.0) <numeric>.

**edgeColor** Edge attribute 'color', e.g. "#ff0000" for red <hexadecimal>.

**edgeType** Edge attribute 'color', options: 'SOLID', 'DOTTED', 'DOTTED\_SHORT', 'LONG\_DASH' (Default='SOLID').

**arrowLength** Edge arrow attribute 'length', options: > 0 (Default=10) <numeric>.

**arrowAngle** Edge arrow attribute 'angle', options: 0-90 (Default=45) <numeric>.

**linkType** Set assignment type either between nodes and containers or containers and containers. Options: 'nested' and 'notnested' (Default='nested') <string>.

**Note**

In 'igraph' package, vertex and edge attributes can be assigned as arbitrary R objects. In order to pass these extensible features to RedeR the attributes must be provided in a valid syntax (see above). Only UNIQUE edges are accepted. If present, mutual/multiple edges will be collapsed to unique edges. In this cases, source-target information is transferred to 'arrowDirection' attribute; other attributes will be related to the first edge from the edge list.

```

```
## End(Not run)
```

---

addLegend	<i>Add graph legends to RedeR application.</i>
-----------	--

---

## Description

Methods to send legends to RedeR app.

## Usage

```
addLegend.color(obj, colvec, ...)
addLegend.size(obj, sizevec, ...)
addLegend.shape(obj, shapevec, ...)
```

## Arguments

<code>obj</code>	Object of RedPort Class.
<code>colvec</code>	Vector with legend colors, either hexadecimal or valid R color names.
<code>sizevec</code>	Vector with legend node size, options: $> 0$ <numeric>.
<code>shapevec</code>	Vector with valid shape names: 'ELLIPSE', 'RECTANGLE', 'ROUNDED_RECTANGLE', 'TRIANGLE', 'DIAMOND'.
<code>...</code>	Additional arguments passed to RedeR application.

## Details

Alternatively, `colvec`, `sizevec` and `shapevec` can be `igraph` objects with legend information previously set by the functions [att.setv](#) and [att.sete](#).

Additional arguments:

**type** Legend type. Options: "node" or "edge" (default: "node") <character>.

**labvec** Vector with legend labels <character>.

**position** Position of the legend in RedeR panel. Options: 'topleft', 'topright', 'bottomleft', 'bottomright' (default: `addLegend.color` "topright", `addLegend.size` "bottomleft", and `addLegend.shape` "bottomright") <character>.

**dxborder** Distance (in pixel) from panel border (default: 5) <numeric>.

**dyborder** Distance (in pixel) from panel border (default: 5) <numeric>.

**vertical** Logical value, set vertical/horizontal position of the legend in the app panel (default: TRUE for `addLegend.color` and `addLegend.size` and FALSE for `addLegend.shape`).

**ftsize** Font size (in pixel) (default: 8) <numeric>.

**title** Legend title <string>.

**dxtitle** Distance (in pixel) from legend title to the main axis (default: 35) <numeric>.

**size** Legend size; only for `addLegend.color` and `addLegend.shape` methods (default: 30) <numeric>.

**bend** Legend width/height ratio; only for `addLegend.color` method (default: 0.85) <numeric>.

**col** Legend color; only for addLegend.size and addLegend.shape methods (default: "#000000")  
<either hexadecimal or valid color name>.

**intersp** Legend inter space (only for addLegend.size and addLegend.shape methods) (default: 0)  
<numeric>.

**edgelen** Length of the edges in addLegend.size method (default: 50) <numeric>.

### Value

Send legend objects to RedeR app.

### Examples

```
rdp <- RedPort('MyPort')

## Not run:

callD(rdp)

cols<-colorRampPalette(colors=c('red','blue'))(14)
addLegend.color(rdp,cols)
addLegend.color(rdp,cols,type="edge")

size<-c(10,20,30,40,50)
addLegend.size(rdp,size)

size<-c(1:10)
addLegend.size(rdp,size,type="edge")

shape<-c('ELLIPSE','RECTANGLE','ROUNDED_RECTANGLE','TRIANGLE','DIAMOND')
addLegend.shape(rdp,shape)

shape<-c('SOLID','DOTTED','DOTTED_SHORT','LONG_DASH')
addLegend.shape(rdp,shape,type="edge")

## End(Not run)
```

---

addNodes

*Add nodes to RedeR graphs.*

---

### Description

Method to add nodes to an active RedeR session.

**Usage**

```
addNodes(obj, nodes)
```

**Arguments**

obj	Object of RedPort Class.
nodes	Node sequence as an array <array of strings>

**Value**

Add graph objects.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
nodes<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addNodes(rdp, nodes)
  updateGraph(rdp)

## End(Not run)
```

---

addSeries

*Add series to RedeR application.*

---

**Description**

Method to send series of graphs to RedeR app.

**Usage**

```
addSeries(obj, g, ...)
```

**Arguments**

obj	Object of RedPort Class.
g	An igraph object.
...	Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**setnodes** Logical value, whether to update node attributes in the new item of the series (default = TRUE).

**setedges** Logical value, whether to add edges and update attributes in the new item of the series (default = TRUE).

**Value**

Submits series of R graphs to RedeR app.

**Author(s)**

Mauro Castro

**See Also**

V(g1)$nodeColor<-heat.colors(vcount(g1))
addSeries( rdp, g1)

## End(Not run)
```

---

addSubgraph

*Add subgraphs to RedeR application.*

---

**Description**

Method to send subgraph to RedeR app.

**Usage**

```
addSubgraph(obj, g, nodes, ...)
```

**Arguments**

obj	Object of RedPort Class.
g	An igraph object.
nodes	Nodes of the subgraph <array of strings>
...	Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**gatt** A list of graph attributes. See attribute syntax in [addGraph](#)

**gscale** Expansion factor of the graph area related to the app panel (default = 75) <numerics>.

**gcoord** Sets the graph x,y center. Coords between 0 and 100 are set to the visible area of the app panel (default = c(75,75)) <numeric vector>.

**theme** Some pre-defined nest attributes. Options: 'tm0','tm1','tm2','tm3','tm4','tm5'

**Value**

Extracts subgraphs from 'igraph' objects and sends the result to the RedeR app.

**Author(s)**

Mauro Castro

**See Also**

[addGraph](#) [addSubgraph.list](#)

**Examples**

```
rdp <- RedPort('MyPort')

## Not run:

callD(rdp)

g <- graph.lattice(c(5,5,5))

#..extracts a subgraph from g and sends to RedeR:
addSubgraph( rdp, g, nodes=c(1:10) )

#..sets some attributes on g prior to extraction!
g$isNest<-TRUE
g$nestColor="#ff0000"
g$scale=50
addSubgraph( rdp, g, nodes=c(1:10) )

#..alternatively, sets an independent list of attributes:
att <-list()
att$isNest<-TRUE
att$nestColor="#0000ff"
att$scale=50
```

```

att$coordX=25
att$coordY=25
addSubgraph( rdp, g, nodes=c(20:30), gatt=att )

#..for further attributes see 'addGraph' function!

## End(Not run)

```

---

addSubgraph.list      *Add a list of subgraphs to RedeR application.*

---

## Description

Method to send subgraphs to RedeR app.

## Usage

```
addSubgraph.list(obj, g, nodeList, ...)
```

## Arguments

obj	Object of RedPort Class.
g	An igraph object.
nodeList	List of nodes. Will be used to extra subgraphs from g.
...	Additional arguments passed to RedeR application.

## Details

Additional arguments:

**gridRows** Number of lines to layout the subgraph panel (default = 2) <integer>

**gridScale** Expansion factor of the grid area in the app panel. Options: 0.0 to 100 (default = 50) <numeric>.

**gscale** Expansion factor each subgraph related to the app panel (default = 20) <numeric>.

**gatt** Either a list or data frame with graph attributes (for data frames, attribute names on cols). See attribute syntax in [addGraph](#)

**update** String argument: if 'all' it forces to update node/edge attributes of a graph already available in the app panel; if 'partial', only node attributes are updated (default = NULL).

**theme** Some pre-defined nest attributes. Options: 'tm0', 'tm1', 'tm2', 'tm3', 'tm4', 'tm5', 'tm6'.

## Value

Extracts subgraphs from 'igraph' objects and sends the result to the RedeR app.

## Author(s)

Mauro Castro

## Examples

```
rdp <- RedPort('MyPort')

## Not run:

callD(rdp)

g <- graph.lattice(c(5,5,5))

#..extract subgraphs from g and send to RedeR:
nl<-list(c(1:10),c(15:20))
att<-data.frame(isNest=c(TRUE,TRUE), nestColor=c("#0000ff","#ff0000"))
addSubgraph.list( rdp, g, nodeList=nl, gridRows=1, gatt=att, gridScale=80)

#..for further attributes see 'addGraph' function!

## End(Not run)
```

---

att

---

*Map and set edge and vertex attributes to RedeR application.*

---

## Description

These functions map data frames containing edge/vertex attributes to an igraph object and set attributes to RedeR.

## Usage

```
att.setv(g, from, to='nodeColor', pal=1, cols=NULL, na.col=grey(0.7), xlim=c(20,100,1), shapes=)
att.sete(g, from, to='edgeColor', pal=1, cols=NULL, na.col=grey(0.7), xlim=c(20,100,1), shapes=)
att.mapv(g, dat, refcol=1)
att.mape(g, dat, refcol=c(1,2))
```

## Arguments

<code>g</code>	An igraph object.
<code>from</code>	An attribute name available in 'g' <string>.
<code>to</code>	A valid RedeR attribute name (see <a href="#">addGraph</a> or type 'att.setv()' or 'att.sete()').
<code>breaks</code>	A numeric vector of two or more breakpoints to be applied to the attribute values.
<code>pal</code>	Default color palette. Options: 1 or 2.
<code>xlim</code>	A numeric vector with three boundaries: c(<lower boundary>, <upper boundary>, <NA>). It corresponds to boundary values to be apply to numeric attributes (e.g. nodeSize). Default: c(20,100,1).
<code>cols</code>	Vector of colors (either hexadecimals or valid R color names).
<code>na.col</code>	A color representing eventual NAs. Default: grey(0.7)
<code>shapes</code>	A string vector with valid RedeR shapes (see <a href="#">addGraph</a> or type 'att.setv()' or 'att.sete()').
<code>categvec</code>	Optional: levels to encode attributes as a factor <vector>.

nquant	Optional: number of breakpoints to split attribute values by quantiles <integer>.
isrev	Optional: reversed version of attribute values <logical>.
getleg	Optional: return legend values <logical>.
dat	A data frame with the attributes to be mapped to 'g'.
refcol	The reference columns in the 'data' object with either node ids (one column <integer>) or edge ids (two columns <vector of two integers>).
roundleg	Integer indicating the number of decimal places (round) in the legend of numerical attributes.

**Value**

Map/set RedeR attributes to igraph objects.

**Author(s)**

Mauro Castro

**See Also**

[addGraph](#)

**Examples**

```
data(ER.deg)

sg <- ER.deg$ceg # an igraph object
dt <- ER.deg$dat # a data frame object

# maps the data frame to the igraph object
sg <- att.mapv(g=sg, dat=dt, refcol=1)

# Sets graph attributes to RedeR!

# sets gene symbol do nodeAlias attribute
sg <- att.setv(sg, from="Symbol", to="nodeAlias")

# sets numerical value to nodeColor attribute
sg <- att.setv(sg, from="logFC.t3...t0", to="nodeColor", breaks=seq(-1,1,0.2), pal=2)

# sets numerical value to nodeSize attribute
sg <- att.setv(sg, from="ERbdist", to="nodeSize", nquant=10, isrev=TRUE, xlim=c(5,40,1))
```

---

calld

*Call RedeR app from R.*

---

**Description**

Method to invoke RedeR application from R.

**Usage**

```
callld(obj, ...)
```

**Arguments**

```
obj          Object of RedPort Class.
...          Additional arguments passed to RedeR application.
```

**Details**

Other arguments can be passed to the system in order to open the application or set additional environment variables. This maybe required when using the callback functions available in RedeR main panel (i.e. 'RCall'). If this is the case, try to pass the location of R home and the path to the dynamic library directory.

**filepath** Path to 'reder.jar' file <string>

**ADDPATH** Add any additional path to RedeR shell <string>

**checks** Paths' security checks. Option: 'lock' (default) or 'unlock' <string>

**Value**

Systems call to open RedeR application and XML-RPC server.

**Author(s)**

Mauro Castro

**See Also**

[RedPort addGraph](#)

**Examples**

```
rdp <- RedPort('MyPort')

## Not run:

  callld(rdp)

## End(Not run)
```

**Description**

Simple function for correlation analysis. This function computes a null distribution via permutation and returns the significant correlation values.

**Usage**

```
cea(x, sig=0.01, p.adj.method="fdr", cor.method="spearman", nper=100, plotcea=TRUE, ...)
```

**Arguments**

<code>x</code>	A matrix or data frame.
<code>sig</code>	Significance threshold.
<code>p.adj.method</code>	Correction method passed to "p.adjust" function.
<code>cor.method</code>	Correlation method passed to "cor" function.
<code>nper</code>	Number of permutations.
<code>plotcea</code>	Logical value, option to plot density and the null distributions.
<code>...</code>	Additional arguments passed to plotcea option.

**Details**

Additional arguments:

**ptype** If plotcea=TRUE, ptype provides 5 pre-defined plotting options: 1, 2, 3, 4, 5 (Default=1) <integer>.

**bk** If plotcea=TRUE, bk removes non-significant values from the density distribution (0 <= bk <=1) <numerics>.

**n.breaks** If plotcea=TRUE, n.breaks sets the number of histogram breaks <integer>.

**plotnull** Logical value, whether to plot the null distribution (Default=TRUE).

**avnull** If plotnull=TRUE, avnull takes the average null distribution (Default=TRUE).

**nullcol** If plotnull=TRUE, nullcol sets the color of the null distribution (Default="black").

**Value**

Matrix with significant correlation values.

**Author(s)**

Mauro Castro

[cor p.adjust](#)

**Examples**

```
data(ER.deg)
#--- a gene expression matrix
exp <- ER.deg$exp
#--- a sample from gx!!
idx <- sample(1:nrow(exp))[1:100]
exp <- exp[idx,]

res <- cea(x=exp, nper=100, plot=FALSE, ptype=4) #ps set 'nper' for at least 1000
```

---

deleteEdges	<i>Remove edges from RedeR graphs.</i>
-------------	--

---

**Description**

Method to remove edges between nodes in an active RedeR session.

**Usage**

```
deleteEdges(obj, edges)
```

**Arguments**

obj	Object of RedPort Class.
edges	Edge sequence as an array <array of strings>

**Value**

Removes the specified edges from the graph.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  deleteEdges(rdp, c("n1", "n3", "n1", "n7") )
  updateGraph(rdp)

## End(Not run)
```

---

deleteNodes	<i>Remove nodes from RedeR graphs.</i>
-------------	--

---

**Description**

Method to remove nodes from an active RedeR session.

**Usage**

```
deleteNodes(obj, nodes)
```

**Arguments**

obj	Object of RedPort Class.
nodes	Node sequence as an array <array of strings>

**Value**

Remove graph objects.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'call').

**Author(s)**

Mauro Castro

edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  deleteNodes(rdp, c("n1", "n3") )
  updateGraph(rdp)

## End(Not run)
```

---

deletePlugin	<i>Remove plugins from RedeR application.</i>
--------------	---

---

**Description**

Method to remove plugins from the RedeR application, including the main menu.

**Usage**

```
deletePlugin(obj, pluginName)
```

**Arguments**

obj	Object of RedPort Class.
pluginName	Plugin name that is available at RedeR application <string>

**Details**

Need description!

**Value**

Delete a plugin from RedeR application.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'call').

**Author(s)**

Mauro Castro

**See Also**

#Prior calling this method build "MyPlugin" using the PluginBuilder!  
rdp <- RedPort('MyPort')  
  
## Not run:  
  
  callD(rdp)  
  deletePlugin(rdp, "MyPlugin")  
  updatePlugins(rdp)  
  #Remove the plugin "MyPlugin" from RedeR  
  
## End(Not run)
```

---

deleteSelectedEdges     *Delete selected edges in RedeR graphs.*

---

**Description**

Remove all edges selected in an active RedeR session.

**Usage**

```
deleteSelectedEdges(obj)
```

**Arguments**

obj                    Object of RedPort Class.

**Value**

Remove graph objects.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  selectNodes(rdp, c("n3", "n4"))
  deleteSelectedNodes(rdp)
  updateGraph(rdp)

## End(Not run)
```

---

deSelectEdges	<i>Unmark selected edges.</i>
---------------	-------------------------------

---

**Description**

Unmark all selected edges in an active RedeR session.

**Usage**

```
deSelectEdges(obj)
```

**Arguments**

obj                    Object of RedPort Class.

**Value**

Unmark edges.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

## End(Not run)
```

---

deSelectGraph	<i>Unmark selected graph objects.</i>
---------------	---------------------------------------

---

**Description**

Unmark all selected objects in an active RedeR session.

**Usage**

```
deSelectGraph(obj)
```

**Arguments**

obj                    Object of RedPort Class.

**Value**

Unmark graph.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'calld').

**Author(s)**

Mauro Castro

**See Also**

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  selectNodes(rdp, c("n3", "n4", "n5"))
  deSelectNodes(rdp)
  updateGraph(rdp)

## End(Not run)
```

---

duplicateGraph                    *Duplicate graphs in RedeR application.*

---

### Description

Method to duplicate graphs and subgraphs of a network.

### Usage

```
duplicateGraph(obj, ...)
```

### Arguments

`obj`                    Object of RedPort Class.  
`...`                    Additional arguments passed to RedeR application.

### Details

Additional arguments:

**isToCopyEdges** Logical value, whether to include edges to the copy (default = TRUE).

**isDefaultCopy** Logical value, whether to duplicate the complete network or to copy only the original graph (default = TRUE).

**nodes** Optional: nodes to be duplicated <array of strings> (p.s. in this case, isDefaultCopy=TRUE).

### Value

Duplicates graphs in RedeR app.

### Author(s)

Mauro Castro

### See Also

[addGraph](#)

### Examples

```
rdp <- RedPort('MyPort')

## Not run:

callD(rdp)

###

g1 <- graph.lattice(c(3,3,3))
addGraph( rdp, g1, layout.kamada.kawai(g1) )
duplicateGraph(rdp)

## End(Not run)
```

---

dynwin

*Wrap R graphics.*

---

### Description

Method to wrap R graphics in RedeR Java classes.

### Usage

```
dynwin(obj, ...)
```

### Arguments

obj	Object of RedPort Class.
...	Additional arguments passed to RedeR application.

### Details

Other arguments:

**width** Initial width of the window <integer>

**height** Initial height of the window <integer>

**ps** Initial point size <integer>

### Value

Returns R graphics as canvas.

### Note

This method should be called only from RedeR plugins!

### Author(s)

Mauro Castro

### See Also

[PluginBuilder RedPort](#)

### Examples

```
#To be used just in Rcalls from RedeR plugins!  
  
## Not run:  
  
dynwin( rdp, width=400, height=300, ps=10 )  
  
## End(Not run)
```

---

exitd                      *Exit RedeR R-to-Java interface.*

---

**Description**

Exit R interface and close the active RedeR session.

**Usage**

```
exitd(obj)
```

**Arguments**

obj                      Object of RedPort Class.

**Value**

Exit software.

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')

## Not run:

  calld(rdp)
  exitd(rdp)

## End(Not run)
```

---

getArrowDirection        *Get arrow direction.*

---

**Description**

Get edge attributes 'arrow direction' from an active RedeR session.

**Usage**

```
getArrowDirection(obj, ...)
```

**Arguments**

`obj`                    Object of RedPort Class.  
`...`                    Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns edge attributes <array of integers>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#), [setArrowDirection](#) [getGraph](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  getArrowDirection(rdp)

## End(Not run)
```

---

getContainerComponets *Get container components.*

---

**Description**

Method to get components (nested objects) of a specific container from an active RedeR session.

**Usage**

```
getContainerComponets(obj, container)
```

**Arguments**

obj                    Object of RedPort Class.  
 container            Name of the container in the graph <string>

**Value**

Returns all nested objects assigned to a container <array of strings>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
el<-matrix(c('n1','n2','n3','n4'), ncol=2, byrow=TRUE)
g <- graph.edgelist(el)

## Not run:

callD(rdp)
addGraph( rdp, g, layout.kamada.kawai(g) )
nestNodes( rdp, c('n1','n2') )
nestNodes( rdp, c("n3","n4") )
updateGraph(rdp)
getContainerComponets(rdp, "N0")

## End(Not run)
```

---

getEdgeColor                    *Get edge color.*

---

**Description**

Method to get edge attributes 'color' from an active RedeR session.

**Usage**

```
getEdgeColor(obj, ...)
```

**Arguments**

obj                    Object of RedPort Class.  
 ...                    Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns edge attributes <array of hexadecimal color codes>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  getEdgeColor(rdp)

## End(Not run)
```

---

getEdgeIDs

*Get edge IDs.*

---

**Description**

Method to get ids of all edges from an active RedeR application.

**Usage**

```
getEdgeIDs(obj, ...)
```

**Arguments**

**obj** Object of RedPort Class.  
**...** Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns edges<array of integers>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  getEdges(rdp)

## End(Not run)
```

---

getEdgeType

*Get edge type.*

---

**Description**

Method to get edge attributes 'type' from an active RedeR session.

**Usage**

```
getEdgeType(obj, ...)
```

**Arguments**

obj                    Object of RedPort Class.  
 ...                    Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns edge attributes <array of strings>

**Note**

  addEdges(rdp, edges)
  updateGraph(rdp)
  getEdgeType(rdp)

## End(Not run)
```

---

getEdgeWeight

*Get edge weight.*

---

**Description**

Method to get edge attributes 'weight' from an active RedeR session.

**Usage**

```
getEdgeWeight(obj, ...)
```

**Arguments**

obj                    Object of RedPort Class.  
 ...                    Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns edge attributes <array of strings>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'call').

  addEdges(rdp, edges)
  updateGraph(rdp)
  getEdgeWidth(rdp)

## End(Not run)
```

---

getGraph

*Get RedeR graph.*

---

**Description**

Method to get and wrap up RedeR graphs into R objects.

**Usage**

```
getGraph(obj, ...)
```

**Arguments**

obj                    Object of RedPort Class.  
 ...                    Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**status** Filter options for RedeR graph status. Valid arguments: <'selected'>, <'nonselected'> or <'all'> (default='all').

**type** Filter options for RedeR graph objects. Valid arguments: <'node'>, <'container'> or <'all'> (default='node').

**attribs** Filter options for RedeR graph attributes. Valid arguments: <'plain'>, <'minimal'> or <'all'> (default='plain').

**Value**

Returns igraph objects.

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  getNodeAliases(rdp)

## End(Not run)
```

---

getNodeBend

*Get node bend.*

---

**Description**

Method to get node attributes 'bend' from an active RedeR session.

**Usage**

```
getNodeBend(obj, ...)
```

**Arguments**

**obj** Object of RedPort Class.  
**...** Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns node attributes <array of numerics>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  getNodeBend(rdp)

## End(Not run)
```

---

getNodeColor

*Get node color.*

---

**Description**

Method to get node attributes 'node color' from an active RedeR session.

**Usage**

```
getNodeColor(obj, ...)
```

**Arguments**

obj                    Object of RedPort Class.  
 ...                    Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns node attributes <array of hexadecimal color codes>

**Note**

```

---

getNodeFontColor	<i>Get font color.</i>
------------------	------------------------

---

**Description**

Method to get node attributes 'font color' from an active RedeR session.

**Usage**

```
getNodeFontColor(obj, ...)
```

**Arguments**

obj	Object of RedPort Class.
...	Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns node attributes <array of hexadecimal color codes>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  getNodeFontColor(rdp)

## End(Not run)
```

---

getNodeFontName	<i>Get font name.</i>
-----------------	-----------------------

---

**Description**

Method to get node attributes 'font name' from an active RedeR session.

**Usage**

```
getNodeFontName(obj, ...)
```

**Arguments**

obj	Object of RedPort Class.
...	Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns node attributes <array of strings>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  getNodeFontName(rdp)

## End(Not run)
```

---

getNodeFontSize

*Get font size.*

---

**Description**

Method to get node attributes 'font size' from an active RedeR session.

**Usage**

```
getNodeFontSize(obj, ...)
```

**Arguments**

obj                    Object of RedPort Class.  
 ...                    Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**type** Filter options. Valid arguments: <'node'>, <'container'> or <'all'>. Default='node'.

**status** Filter options. Valid arguments: <'selected'>, <'nonselected'> or <'all'>. Default='all'

**Value**

Returns node attributes <array of strings>

## End(Not run)
```

---

gtoy.rm

*Random graphs and modules.*

---

## Description

A very simple function to generate random graphs with modular structures.

## Usage

```
gtoy.rm(m=3, nmax=30, nmin=3, p1=0.5, p2=0.05, p3=0.9)
```

**Arguments**

m	Number of modules.
nmax	The maximum number of vertices in each module.
nmin	The minimum number of vertices in each module.
p1	Probability for adding new vertices to a module.
p2	Probability for drawing an edge between modules.
p3	Probability for drawing an edge within modules.

**Value**

Returns a igraph object.

**Author(s)**

Mauro Castro

**Examples**

```
#g<-gtoy.rm()
```

---

isDynamicsActive	<i>Inquires about RedeR current state.</i>
------------------	--

---

**Description**

Inquires whether 'dynamics' algorithm is active in RedeR application.

**Usage**

```
isDynamicsActive(obj)
```

**Arguments**

obj	Object of RedPort Class.
-----	--------------------------

**Value**

Returns 1<integer> if true, 0<integer> otherwise.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'calld').

**Author(s)**

Mauro Castro

**See Also**[RedPort](#)**Examples**

```
rdp <- RedPort('MyPort')

## Not run:

callD(rdp)
isDynamicsActive (rdp)
# 1 or 0

## End(Not run)
```

---

mergeNodes	<i>Merge nodes.</i>
------------	---------------------

---

**Description**

Merge nodes in an active RedeR session and build a new group.

**Usage**

```
mergeNodes(obj, nodes)
```

**Arguments**

obj	Object of RedPort Class.
nodes	Node sequence <array of strings>

**Value**

Add/change graph objects.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
nodes<-c("n1","n2","n1","n3","n1","n4","n1","n5","n1","n6","n1","n7")

## Not run:

  callD(rdp)
  addNodes(rdp, nodes)
  mergeNodes(rdp,c("n2","n3","n4"))
  updateGraph(rdp)

## End(Not run)
```

---

mergeOutEdges	<i>Merge out-edges between connected containers and transfers edges from nodes to containers.</i>
---------------	---

---

**Description**

Method to assign out-edges to containers in an active RedeR session. This method transfers edges from nodes to the respective containers.

**Usage**

```
mergeOutEdges(obj,...)
```

**Arguments**

obj	Object of RedPort Class.
...	Additional arguments passed to RedeR application.

**Details**

Additional arguments:

**rescale** Logical value. Whether to rescale the out-edge width to fit container size limits; if false, it will run a simple sum (default=TRUE).

**lb** Custom lower bound to rescale edge width (default=NULL) <numerics>.

**ub** Custom upper bound to rescale edge width between containers (default=NULL) <numerics>.

**nlev** Number of levels to be merged in the hierarchy (default=1) <integer>.

**Value**

Add/change edge assignments.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**[RedPort](#)**Examples**

```
rdp <- RedPort('MyPort')
e1<-matrix(c("n1","n2","n1","n3","n1","n4","n2","n5","n2","n6","n2","n7"), ncol=2, byrow=TRUE)
#g <- graph.edgelist(e1)

## Not run:

callD(rdp)
addGraph( rdp, g, layout.kamada.kawai(g) )
nestNodes( rdp, c("n1","n2") )
mergeOutEdges(rdp)
updateGraph(rdp)

## End(Not run)
```

nesthc

*Nest hclust objects to containers.***Description**

Method to nest nodes in an active RedeR session.

**Usage**

```
nesthc(obj, hc, ...)
```

**Arguments**

<code>obj</code>	Object of RedPort Class.
<code>hc</code>	Either an object of hclust of pvclust class.
<code>...</code>	Additional arguments passed to RedeR application; if a "pvclust" object, it also passes arguments for "pvpick" function (e.g. to set the p-value threshold).

**Details**

Additional arguments:

**cutlevel** Numeric value indicating the point where the hclust object should be cut (default = 2). The distance is related to the option 'metric'. For "rootdist" and "leafdist", the cut level is related to the n steps required to get to the root's level or to the leaf's level, respectively (n>=1). For 'height', the cut is related to the corresponding dendrogram height <numeric>.

**metric** Metric used to cut the hclust object at the top level (Options: "rootdist", "leafdist" or "height"; default="rootdist") <string>.

**nmemb** Minimum number of members for a nest (>=2) <numeric>.

**nlev** Maximum number of levels of a nested sequence (default=2) <numeric>.

**grid** Number of rows and cols to lay out graphs in the panel (default = c(2,3)) <numeric>.

**gridScale** Expansion factor of the grid area in the app panel. Options: 0.0 to 100 (default = 75) <numeric>.

**gscale** Expansion factor to set the nest area related to the parents – or related to the app panel. Provided as a vector with three numbers, c(n1,n2,n3): n1 is related to nests at the first level of the hierarchy (i.e. nests rooted to the panel); n2 is related to nests from single branches, and n3 nests from double branches (default = c(30,75,45)) <numeric>.

**isAnchor** Logical value; it sets whether to anchor containers in dynamic layouts.

**isAssign** Logical value; it sets whether to assign container names to nested nodes.

**theme** Some pre-defined nest attributes. Options: 'tm0','tm1','tm2','tm3','tm4','tm5', 'tm6' (default: 'tm6') <string>. Alternatively, it can be a list with customized attributes.

**nlinewidth** Line width of a nested series containers.

**nfontsz** Label font size a nested series containers.

**plothc** Logical value; whether to plot the corresponding hclust object (i.e. dendrogram).

**col** A color vector; it is used to color labels in both containers and corresponding hclust object (i.e. dendrogram nodes).

**cex** Numeric character expansion factor of dendrogram text and labels.

**xlab** A label for the dendrogram x axis.

**ylab** A label for the dendrogram y axis.

### Value

Add/change graph objects and plot corresponding hclust object.

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Examples

```
#g <- gtoy.rm()
#hc<-hclust(dist(get.adjacency(g)))
#plot(hc)

#rdp <- RedPort('MyPort')

## Not run:

  callD(rdp)
  addGraph(rdp,g)
  nesthc(rdp, hc)

## End(Not run)
```

---

nestNodes	<i>Nest nodes to containers.</i>
-----------	----------------------------------

---

### Description

Method to nest nodes in an active RedeR session.

### Usage

```
nestNodes(obj, nodes, ...)
```

### Arguments

obj	Object of RedPort Class.
nodes	<array of strings>
...	Additional arguments passed to RedeR application.

### Details

Additional arguments:

**nestImage** Status of the container on the screen: <'plain'>, <'transparent'>, or <'hide'> (default = 'plain').

**isAssign** Logical value, whether to assign the container name to the nested nodes (default = TRUE).

**isAnchor** Logical value, whether is to anchor the container in dynamic layouts (default = FALSE).

**gscale** Expansion factor of the nest area related to a parent nest – or related to the app panel (default = 40) <numerics>.

**gcoord** Sets the nest c(x,y) center related to the parent center. Coords between 0 and 100 are set to the inner area (default = NULL) <numeric vector>.

**parent** Nest ID of a parent nest. Must be used with 'isAssign=TRUE' (default = NULL).

**gatt** A list with graph attributes. See nest attribute syntax in [addGraph](#)

**theme** Some pre-defined nest attributes. Options: 'tm0', 'tm1', 'tm2', 'tm3', 'tm4', 'tm5', 'tm6' <string>. Alternatively, it can be a list with customized attributes.

### Value

Add/change graph objects.

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

## End(Not run)
```

---

ping

*Test RedeR R-to-Java interface.*

---

## Description

Test R interface and the connection to an active RedeR session.

## Usage

```
ping(obj)
```

## Arguments

obj                    Object of RedPort Class.

## Value

"R interface is ready to use!"

## Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

```

---

**PluginBuilder***The constructor for the PluginBuilder class.*

---

**Description**

Constructor to build RedeR plugins.

**Usage**

```
PluginBuilder(title='plugin', allMethods, allAddons=NULL)
```

**Arguments**

<code>title</code>	A character string representing the plugin name.
<code>allMethods</code>	List of all plugin methods wrapped as R functions (does not accept arguments).
<code>allAddons</code>	List of all additional expressions wrapped as R functions (accept arguments).

**Details**

RedeR plug-ins have two main sections: methods and add-ons. The 'methods' section can be regarded as the plug-in trigger. When installed in the app, this trigger is used to start a given analysis by unfolding the R expressions wrapped in the methods. Add-ons use the same strategy, but remains hidden in the app – and it is optional.

**Value**

Build a new plugin.

**Note**

The 'allMethods' section does not accept arguments. Formal functions can be passed to add-ons as additional arguments.

**Author(s)**

Mauro Castro

**See Also**

**Examples**

```
#Wrap up a new method into a function
mt1 <- function()
{
  rdp <- RedPort('MyPort')
  g <- getGraph(rdp)
  dg <- degree.distribution(g)
  dynwin(rdp) #creates a RedeR java graphics device
  plot(dg, xlab = "k", ylab = "P(k)")
}

#Initiate the plugin skeleton
plugin <- PluginBuilder(title="MyPlugin", allMethods=list(mt1=mt1))

#Invoke RedeR and submit the new plugin

rdp <- RedPort('MyPort')

## Not run:
callD(rdp)
submitPlugin(rdp, plugin)
updatePlugins(rdp)

## End(Not run)
```

---

PluginBuilder-class    *Class 'PluginBuilder'*

---

**Description**

A class providing methods to build plugins to RedeR application.

**Slots**

**title:** A character string representing the plugin name.

**allMethods:** List of all plugin methods wrapped as R functions.

**allAddons:** List of all additional R expression wrapped as R functions.

**Author(s)**

Mauro Castro

**Examples**

```
#Initiates a new method, say mt1
mt1<-function(){"#Your code here!"}
#Initiates a plugin skeleton
plugin <- PluginBuilder ( title = "MyPlugin", allMethods = list(mt1=mt1) )
```

---

pluginParser

*RedeR plugin parser.*

---

**Description**

Function to parse R expressions to RedeR plugins.

**Usage**

```
pluginParser(dynname, dyncode, args=FALSE)
```

**Arguments**

dynname	Name of the expression to display in RedeR application.
dyncode	R code (e.g. function) to be parsed.
args	Option to parse formal arguments.

**Value**

Returns parsed but unevaluated expressions.

**Note**

This function is used internally by the 'PluginBuilder' to parse plug-in methods and add-ons.

**Author(s)**

Mauro Castro

**See Also**

**Examples**

```
x<-function(){...}
pluginParser('MyMethod', x, args=TRUE)
```

---

 RedeR.data

*Pre-processed dataset for RedeR case study.*

---

### Description

Preprocessed data from a time-course gene expression and ChIP-on-chip analysis of estrogen receptor (ER) binding sites in MCF7 breast cancer cell line (Carroll et al, 2006).

### Usage

```
data(Carroll2006)
```

### Format

Carroll2006 List containing 'exp', 'tgs', 'ids', and 'bdsites' R objects.

### Details

The gene expression dataset consists of 12 time-course Affymetrix U133Plus2.0 microarrays: 3 replicates at 0h, 3 replicates at 3h, 3 replicates at 6h and 3 replicates at 12h. The original dataset is available at GEO database (GSE11324). The gene ER binding site dataset consists of a Bed file of ER ChIP-on-chip experiment. The original dataset is available at <http://research.dfci.harvard.edu/brownlab/datasets/index> (ER sites from the Bed file '1E-5.bed').

**Carroll2006\$exp** data.frame with log2 gene expression dataset.

**Carroll2006\$tgs** data.frame with microarray details (e.g. targets for limma analysis).

**Carroll2006\$ids** data.frame with gene ids used in RedeR case study.

**Carroll2006\$bdsites** data.frame with ER binding sites mapped to genome build GRCh37.

**hs.inter** Human interactome extracted from the Human Protein Reference Database (HPRD) in April 2011 <igraph object> ('name' attribute is mapped to ENTREZ ID).

**ER.limma** data-frame containing pre-processed results from limma analysis and ER binding sites mapped to differentially expressed (DE) genes. Content: annotation (ENTREZ and Symbol), time-course fold change (logFC.t3, logFC.t6, logFC.t12), p values (p.value.t3, p.value.t6, p.value.t12), DE genes (degenes.t3, degenes.t6, degenes.t12) and distance of the closest ER binding site to the TSS – in kb (ERbdist).

**ER.deg\$dat** Summary from ER.limma data object with extracted data for differentially expressed genes only.

**ER.deg\$exp** Data matrix with log2 gene expression values of DE genes.

**ER.deg\$ceg** Co-expression gene network of early ER-responsive genes computed by the function [cea](#) [cea](#).

rederpost

*Remote procedure calls optimized for RedeR.*

---

**Description**

Internal function.

**Author(s)**

Mauro Castro

---

RedPort

*The constructor for the RedPort class.*

---

**Description**

Constructor to build RedeR interface via XML-RPC (remote procedure call) server.

**Usage**

```
RedPort(title = 'default', host = '127.0.0.1', port = 9091, jclass = 'reder/rj/CanvasR')
```

**Arguments**

title	A character string representing the XML-RPC port.
host	The domain name of the machine that is running the RedeR XML-RPC server.
port	An integer specifying the port on which the XML-RPC server should listen.
jclass	A character string specifying the RedeR Java class that should wrap up R graphics.

**Value**

An object of the RedPort Class.

**Author(s)**

Mauro Castro

**See Also**

[calld](#)

**Examples**

```
rdp <- RedPort('MyPort')
```

---

RedPort-class

Class "RedPort"

---

### Description

A class providing access to the RedeR application.

### Slots

**title:** The name of the XML-RPC port.

**uri:** The uri to the XML-RPC server.

**port:** The port number to the XML-RPC server.

**jclass:** The RedeR Java class that should wrap up R graphics.

### Methods

#### Get node attributes from a RedeR session:

[getNode](#)

[getNodeIDs](#)

[getNodeAliases](#)

[getNodeLineColor](#)

[getNodeFontName](#)

[getNodeFontStyle](#)

[getNodeFontSize](#)

[getNodeFontColor](#)

[getNodeFontX](#)

[getNodeFontY](#)

[getNodeWeight](#)

#### Set node attributes from a RedeR session:

[setNodeXY](#)

[setNodeBend](#)

[setNodeSize](#)

[setNodeShape](#)

[setNodeColor](#)

[setNodeLineWidth](#)

[setNodeLineColor](#)

**setNodeFontName**  
**setNodeFontStyle**  
**setNodeFontSize**  
**setNodeFontColor**  
**setNodeFontXY**  
**setNodeWeight**

**Get edge attributes from a RedeR session:**

**getEdges**  
**getSourceEdges**  
**getTargetEdges**  
**getEdgeIDs**  
**getSourceEdgeIDs**  
**getTargetEdgeIDs**  
**getArrowDirection**  
**getEdgeWidth**  
**getEdgeColor**  
**getEdgeType**  
**getEdgeWeight**

**Set edge attributes from a RedeR session:**

**setArrowDirection**  
**setEdgeWidth**  
**setEdgeColor**  
**setEdgeType**  
**setEdgeWeight**

**Methods that change graph structure:**

**addGraph**  
**getGraph**  
**addNodes**  
**deleteNodes**  
**nestNodes**  
**updateContainerSize**  
**mergeOutEdges**  
**getContainerComponets**  
**mergeNodes**  
**addEdges**  
**addEdgeBetweenContainers**  
**deleteEdges**

**Methods to wrap up attributes and add/get graphs to/from RedeR:**

**addGraph**  
**getGraph**  
**addSubgraph**  
**addSeries**  
**duplicateGraph**

**Other methods to manipulate RedeR graphs:**

**updateGraph**  
**selectEdges**  
**selectNodes**  
**selectAllEdges**  
**selectAllNodes**  
**selectGraph**  
**deSelectEdges**  
**deSelectNodes**  
**deSelectGraph**  
**deleteSelectedEdges**  
**deleteSelectedNodes**  
**isDynamicsActive**

**Methods to establish RedeR server connection:**

**ping**  
**version**  
**calld**  
**exitd**  
**reseta**

**Methods to build RedeR plugins:**

**PluginBuilder**  
**submitPlugin**  
**deletePlugin**  
**updatePlugins**  
**pluginParser**  
**dynwin**

**Details**

RedPort methods invoke RedeR application via XML-RPC (remote procedure call) server. For each R method listed above there is a Java mirror that executes a callback procedure. Therefore, the Java callback engine must be initialized before any callback from RedeR (i.e. start the Java application).

**Author(s)**

Mauro Castro

**Examples**

```
# Creates a RedeR object by calling the constructor  
rdp <- RedPort('MyPort')
```

---

<code>relax</code>	<i>relax</i>
--------------------	--------------

---

### Description

This function starts the dynamic layout and sets the force-directed options available in RedeR app.

### Usage

```
relax(obj,p1=100,p2=100,p3=100,p4=100,p5=100,p6=100,p7=10,p8=10,ps=FALSE)
```

### Arguments

<code>obj</code>	Object of RedPort Class.
<code>p1</code>	Edge target length (in pixels; $\geq 1$ ) <numeric>.
<code>p2</code>	Edge stiffness (arbitrary unities; $\geq 1$ ) <numeric>.
<code>p3</code>	Node repel factor (arbitrary unities; $\geq 1$ ) <numeric>.
<code>p4</code>	Node perimeter effect (in pixels; $\geq 1$ ) <numeric>.
<code>p5</code>	Node speed limit (arbitrary unities; $\geq 1$ ) <numeric>.
<code>p6</code>	Nest-nest edge target length, i.e., edge target between linked containers (in pixels; $\geq 1$ ) <numeric>.
<code>p7</code>	Nest-node repel factor, i.e., repulsion among containers and out-nodes (arbitrary unities; $\geq 1$ ) <numeric>.
<code>p8</code>	Repulsion radius, i.e., this parameter limits the repel factor range (given in p1 unites; $\geq 1$ ) <numeric>.
<code>ps</code>	Panel settings: logical value, whether to start interactive panel.

### Details

One of the most versatile features of RedeR is the ability to deal with nested network objects using dynamic simulation, which makes it possible to represent, for example, subnetworks and time-series onto the same graph in a user-friendly routine. The simulation uses force-directed algorithms as described elsewhere (Brandes 2001; Fruchterman and Reingold 1991). Here we adapted the method to deal with nested networks. In force-directed graphs, each edge can be regarded as a spring - with a given target length - and can either exert a repulsive or attractive force on the connected nodes, while nodes are analogous to mutually repulsive charged particles that move according to the applied forces. In RedeR, the simulation is additionally constrained by the hierarchical structure. For example, a nested node is constrained to its parent-node by opposing forces applied by the nest, which is regarded as a special node whose nested objects can reach a local equilibrium independently from other network levels. The simulation is adjusted by global options and evolves iteratively (and interactively) until the system reaches the equilibrium state. The parameters controlling the dynamics are arbitrarily set to layout sparse networks with a few nodes (e.g. 10-100 nodes). For large and dense networks better results can be achieved interactively by tuning one or more parameters.

```

---

selectNodes	<i>Select nodes.</i>
-------------	----------------------

---

### Description

Method to select nodes in an active RedeR application. Selected objects are put available for other methods. It can be done interactively as well.

### Usage

```
selectNodes(obj, nodes, nt=NULL)
```

### Arguments

obj	Object of RedPort Class.
nodes	Names of nodes (or containers) <string or array of strings>
nt	Optional for nested nodes: to restrict searching to a specific container <string>

### Value

Mark nodes – which can be handled by other methods.

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  selectNodes(rdp,c("n3", "n4", "n5"))
  updateGraph(rdp)

## End(Not run)
```

---

setArrowDirection      *Set arrow direction.*

---

### Description

Method to set edge attribute 'arrow direction' in active RedeR sessions.

### Usage

```
setArrowDirection(obj, nodeA, nodeB, direction)
```

### Arguments

obj	Object of RedPort Class.
nodeA	Name <string>
nodeB	Name <string>
direction	Options: 0 (A-B), 1 (A->B), 2 (A<-B) or 3 (A<->B) <integer>

### Value

Sets edge attribute <integer>

### Note

The direction is set according to the edge order in the app (i.e. the edge list available inside RedeR). So, if a request for direction "1" places nodeA='B' and nodeB='A', then the direction will appear as A->B in the app.

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setArrowDirection(rdp, "n1", "n2", 2)
  updateGraph(rdp)

## End(Not run)
```

---

setEdgeColor	<i>Set edge color.</i>
--------------	------------------------

---

**Description**

Method to set edge attribute 'color' in active RedeR sessions.

**Usage**

```
setEdgeColor(obj, nodeA, nodeB, color)
```

**Arguments**

obj	Object of RedPort Class.
nodeA	Name <string>
nodeB	Name <string>
color	e.g. "#ff0000" for red <hexadecimal>

**Value**

Sets edge attribute <hexadecimal>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#), [getEdgeColor](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

callD(rdp)
addEdges(rdp, edges)
setEdgeColor(rdp, "n1", "n2", "#ff0000")
updateGraph(rdp)

## End(Not run)
```

---

setEdgeType	<i>Set edge type.</i>
-------------	-----------------------

---

### Description

Method to set edge attribute 'type' in active RedeR sessions.

### Usage

```
setEdgeType(obj, nodeA, nodeB, type)
```

### Arguments

obj	Object of RedPort Class.
nodeA	Name <string>
nodeB	Name <string>
type	Options: 'SOLID', 'DOTTED', 'DOTTED_SHORT', 'LONG_DASH' <string>

### Value

Sets edge attribute <string>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getEdgeType](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setEdgeType(rdp, "n1", "n2", "DOTTED")
  updateGraph(rdp)

## End(Not run)
```

---

setEdgeWeight	<i>Set edge weight.</i>
---------------	-------------------------

---

**Description**

Method to set edge attribute 'weight' in active RedeR sessions.

**Usage**

```
setEdgeWeight(obj, nodeA, nodeB, weight)
```

**Arguments**

obj	Object of RedPort Class.
nodeA	Node name <string>
nodeB	Node name <string>
weight	Edge weight <numeric>

**Value**

Sets edge attribute <numeric>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#), [getEdgeWeight](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  setEdgeWeight(rdp, "n1", "n2", 0.5)
  #Check attribs in RedeR app and run 'relax'!

## End(Not run)
```

---

setEdgeWidth	<i>Set edge width.</i>
--------------	------------------------

---

### Description

Method to set edge attribute 'width' in active RedeR sessions.

### Usage

```
setEdgeWidth(obj, nodeA, nodeB, width)
```

### Arguments

obj	Object of RedPort Class.
nodeA	Node name <string>
nodeB	Node name <string>
width	Options: > 0.0 <numeric>

### Value

Sets edge attribute <numeric>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort, getEdgeWidth](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setEdgeWidth(rdp, "n1", "n2", 4.0)
  updateGraph(rdp)

## End(Not run)
```

---

setNodeAlias	<i>Set node alias.</i>
--------------	------------------------

---

### Description

Method to set node attributes 'alias' in active RedeR sessions.

### Usage

```
setNodeAlias(obj, node, alias)
```

### Arguments

obj	Object of RedPort Class.
node	Node name <string>
alias	Node alias <string>

### Value

Sets node attribute <string>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort getNodeAliases](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeAlias(rdp, "n1", "Node1")
  updateGraph(rdp)

## End(Not run)
```

---

setNodeBend	<i>Set node bend.</i>
-------------	-----------------------

---

**Description**

Method to set node attribute 'bend' in active RedeR sessions.

**Usage**

```
setNodeBend(obj, node, bend)
```

**Arguments**

obj	Object of RedPort Class.
node	Name <string>
bend	Options: 0-100% <numeric>

**Details**

This is an arbitrary argument that produces different forms using the same basic node shape (e.g. to change the eccentricity of an ellipse)

**Value**

Sets node attribute <numeric>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#), [getNodeBend](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeBend(rdp, "n1", 2.5)
  updateGraph(rdp)

## End(Not run)
```

---

setNodeColor	<i>Set node color.</i>
--------------	------------------------

---

### Description

Method to set node attribute 'color' in active RedeR sessions.

### Usage

```
setNodeColor(obj, node, color)
```

### Arguments

obj	Object of RedPort Class.
node	Name <string>
color	e.g. "#ff0000" for red <hexadecimal>

### Value

Sets node attribute <hexadecimal>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeColor](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeColor(rdp, "n1", "#ff0000")
  updateGraph(rdp)

## End(Not run)
```

---

setNodeFontColor	<i>Set font color.</i>
------------------	------------------------

---

### Description

Method to set node attribute 'font color' in active RedeR sessions.

### Usage

```
setNodeFontColor(obj, node, color)
```

### Arguments

obj	Object of RedPort Class.
node	Name <string>
color	e.g. "#ff0000" for red <hexadecimal>

### Value

Sets node attribute <hexadecimal>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeFontColor](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeFontColor(rdp, "n1", "#ff0000")
  updateGraph(rdp)

## End(Not run)
```

---

setNodeFontName	<i>Set font name.</i>
-----------------	-----------------------

---

### Description

Method to set node attribute 'font name' in active RedeR sessions.

### Usage

```
setNodeFontName(obj, node, name)
```

### Arguments

obj	Object of RedPort Class.
node	Node name <string>
name	Font name (options are JRE or system dependent) <string>

### Value

Sets node attribute <string>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeFontName](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
#Note: font names are system dependent!
  setNodeFontName(rdp, "n1", "Arial")
  updateGraph(rdp)

## End(Not run)
```

---

setNodeFontSize	<i>Set font size.</i>
-----------------	-----------------------

---

### Description

Method to set node attribute 'font size' in active RedeR sessions.

### Usage

```
setNodeFontSize(obj, node, size)
```

### Arguments

obj	Object of RedPort Class.
node	Name <string>
size	Options: >= 0 <integer>

### Value

Sets node attribute <integer>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeFontSize](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeFontSize(rdp, "n1", 50)
  updateGraph(rdp)

## End(Not run)
```

---

setNodeFontStyle	<i>Set font style.</i>
------------------	------------------------

---

### Description

Method to set node attribute 'font style' in active RedeR sessions.

### Usage

```
setNodeFontStyle(obj, node, style)
```

### Arguments

obj	Object of RedPort Class.
node	Node name <string>
style	Options: 0 (PLAIN), 1 (BOLD), 2 (ITALIC), or 3 (BOLD+ITALIC) <integer>

### Value

Sets node attribute <integer>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeFontStyle](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeFontStyle(rdp, "n1", 1)
  updateGraph(rdp)

## End(Not run)
```

---

setNodeFontXY                      *Set font x,y coordinates.*

---

### Description

Method to set node attribute 'font XY position' in active RedeR sessions.

### Usage

```
setNodeFontXY(obj, node, x, y)
```

### Arguments

obj	Object of RedPort Class.
node	Node name<string>
x	relative x coord. (related to x node position) <numeric>
y	relative y coord. (related to y node position)<numeric>

### Value

Sets node attribute <numeric>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeFontX](#), [getNodeFontY](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

callD(rdp)
addEdges(rdp, edges)
setNodeFontXY(rdp, "n1", 50.0, 50.0)
updateGraph(rdp)

## End(Not run)
```

---

setNodeLineColor	<i>Set node-line color.</i>
------------------	-----------------------------

---

### Description

Method to set node attribute 'line color' in active RedeR sessions.

### Usage

```
setNodeLineColor(obj, node, color)
```

### Arguments

obj	Object of RedPort Class.
node	Name <string>
color	e.g. "#ff0000" for red <hexadecimal>

### Value

Sets node attribute <hexadecimal>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeLineColor](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeLineColor(rdp, "n1", "#3333ff")
  updateGraph(rdp)

## End(Not run)
```

---

setNodeLineWidth	<i>Set node-line width.</i>
------------------	-----------------------------

---

### Description

Method to set node attribute 'line width' in active RedeR sessions.

### Usage

```
setNodeLineWidth(obj, node, width)
```

### Arguments

obj	Object of RedPort Class.
node	Name <string>
width	Options: $\geq 0$ <numeric>

### Value

Sets node attribute <numeric>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeLineWidth](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeLineWidth(rdp, "n1", 5.5)
  updateGraph(rdp)

## End(Not run)
```

---

setNodeShape	<i>Set node shape.</i>
--------------	------------------------

---

### Description

Method to set node attribute 'shape' in active RedeR sessions.

### Usage

```
setNodeShape(obj, node, shape)
```

### Arguments

obj	Object of RedPort Class.
node	Name <string>
shape	Options: 'ELLIPSE', 'RECTANGLE', 'ROUNDED_RECTANGLE', 'TRIANGLE', 'DIAMOND' <string>

### Details

See 'setNodeBend' to produce different shapes using the same basic node form (e.g. to change the eccentricity of an ellipse).

### Value

Sets node attribute <string>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeShape](#) [setNodeBend](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeShape(rdp, "n1", "RECTANGLE")
  updateGraph(rdp)

## End(Not run)
```

---

setNodeSize	<i>Set node size.</i>
-------------	-----------------------

---

### Description

Method to set node attribute 'size' in active RedeR sessions.

### Usage

```
setNodeSize(obj, node, size)
```

### Arguments

obj	Object of RedPort Class.
node	Name <string>
size	Options: $\geq 0$ <numeric>

### Value

Sets node attribute <numeric>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeSize](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  setNodeSize(rdp, "n1", 40.0)
  updateGraph(rdp)

## End(Not run)
```

---

setNodeWeight	<i>Set node weight.</i>
---------------	-------------------------

---

### Description

Method to set node attribute 'weight' in active RedeR sessions.

### Usage

```
setNodeWeight(obj, node, weight)
```

### Arguments

obj	Object of RedPort Class.
node	Node name <string>
weight	Node weight <numeric>

### Value

Sets node attribute <numeric>

### Note

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

### Author(s)

Mauro Castro

### See Also

[RedPort](#), [getNodeWeight](#)

### Examples

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)
  setNodeWeight(rdp, "n1", 2.0)
  getNodeWeight(rdp)
  #Available to internal RedeR methods (e.g. transfer att to node color or size)

## End(Not run)
```

---

setNodeXY	<i>Set node x,y coordinates.</i>
-----------	----------------------------------

---

**Description**

Method to set node attribute 'XY position' in active RedeR sessions.

**Usage**

```
setNodeXY(obj, node, x, y)
```

**Arguments**

obj	Object of RedPort Class.
node	Node name<string>
x	x coord. <numeric>
y	y coord. <numeric>

**Value**

Sets node attribute <numeric>

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#), [getNodeX](#), [getNodeY](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3")

## Not run:

callD(rdp)
addEdges(rdp, edges)
setNodeXY(rdp, "n1", 200.0, 200.0)
setNodeXY(rdp, "n2", 100.0, 100.0)
setNodeXY(rdp, "n3", 300.0, 300.0)
updateGraph(rdp)

## End(Not run)
```

---

subg	<i>Subgraph of a graph.</i>
------	-----------------------------

---

**Description**

Creates a subgraph containing only nodes specified from a data frame, including all edges among neighbors.

**Usage**

```
subg(g, dat, refcol=1, maincomp=TRUE, connected=TRUE, transdat=TRUE)
```

**Arguments**

<code>g</code>	An igraph object.
<code>dat</code>	A data frame with node ids and attributes to be mapped to 'g'.
<code>refcol</code>	The reference column (node ids) in the 'dat' object.
<code>maincomp</code>	Logical value, whether to return only the main component of the subgraph.
<code>connected</code>	Logical value, whether to return only connected nodes.
<code>transdat</code>	Logical value, whether to transfer node attributes from the 'dat' object to the subgraph.

**Value**

Returns a igraph object.

**Author(s)**

Mauro Castro

**Examples**

```
data(hs.inter)
data(ER.deg)
#subnet <- subg(g=hs.inter, dat=ER.deg$dat, refcol=1)
```

---

submitPlugin	<i>Submit plugins to RedeR application.</i>
--------------	---

---

**Description**

Method to send R-code to RedeR app in order to upload a new plugin.

**Usage**

```
submitPlugin(obj, plugin)
```

**Arguments**

obj                    Object of RedPort Class.  
plugin                Object of PluginBuilder Class.

**Value**

Send a new plugin to RedeR application.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[PluginBuilder](#) [updatePlugins](#) [deletePlugin](#) [pluginParser](#)

**Examples**

```
#Set a simple example to initiate a plugin skeleton

#Initiates a new method, say mt1
mt1<-function(){"#Your code here!"}

#Initiates a plugin skeleton
plugin <- PluginBuilder ( title = "MyPlugin", allMethods = list(mt1=mt1) )

## Not run:
#Invoke RedeR application and load the new plugin
rdp <- RedPort('MyPort')
callD(rdp)
submitPlugin(rdp, plugin)
updatePlugins(rdp)

## End(Not run)
```

---

updateContainerSize    *Update container size.*

---

**Description**

Updates the size of all containers in an active RedeR session.

**Usage**

```
updateContainerSize(obj)
```

**Arguments**

obj                    Object of RedPort Class.

**Value**

Updates RedeR's container objects.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  nestNodes( rdp, c("n2", "n3") )
  updateContainerSize(rdp)
  updateGraph(rdp)

## End(Not run)
```

---

updateGraph

*Update RedeR graphs.*

---

**Description**

Updates an active RedeR application session.

**Usage**

```
updateGraph(obj)
```

**Arguments**

obj                    Object of RedPort Class.

**Value**

Updates RedeR graph.

**Note**

Prior calling this method make sure that there is an active RedeR session.

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')
edges<-c("n1", "n2", "n1", "n3", "n1", "n4", "n1", "n5", "n1", "n6", "n1", "n7")

## Not run:

  callD(rdp)
  addEdges(rdp, edges)
  updateGraph(rdp)

## End(Not run)
```

---

updatePlugins

*Update RedeR plugins.*

---

**Description**

Method to call RedeR application in order to update plugins sent by R command.

**Usage**

```
updatePlugins(obj)
```

**Arguments**

obj                    Object of RedPort Class.

**Value**

Updates new plugins.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'callD').

**Author(s)**

Mauro Castro

**See Also**

[PluginBuilder](#) [submitPlugin](#) [deletePlugin](#) [pluginParser](#)

**Examples**

```
rdp <- RedPort('MyPort')

## Not run:
  calld(rdp)
  updatePlugins(rdp)

## End(Not run)
```

---

version

*Version*

---

**Description**

Check RedeR application version.

**Usage**

```
version(obj)
```

**Arguments**

obj                    Object of RedPort Class.

**Value**

Returns the version of the current RedeR application that is listening a specified XML-RPC port.

**Note**

Prior calling this method invoke RedeR application via XML-RPC server (i.e. 'calld').

**Author(s)**

Mauro Castro

**See Also**

[RedPort](#)

**Examples**

```
rdp <- RedPort('MyPort')

## Not run:

  calld(rdp)
  version(rdp)
  # "RedeR v1.0"

## End(Not run)
```
