

Package ‘phyext2’

October 14, 2022

Type Package

Title An Extension (for Package 'SigTree') of Some of the Classes in Package 'phylobase'

Version 0.0.4

Date 2015-07-27

Author J. Conrad Stack

Maintainer John R. Stevens <john.r.stevens@usu.edu>

Imports methods, phylobase, ape, grid, stats

Description Based on (but not identical to) the no-longer-maintained package 'phyext', provides enhancements to 'phylobase' classes, specifically for use by package 'SigTree'; provides classes and methods which help users manipulate branch-annotated trees (as in 'SigTree'); also provides support for a few other extra features.

License GPL-3

NeedsCompilation no

--------------	----------

phyext2

Misc. functions from phyext package

Description

Internal functions, classes, and methods (from the no-longer-maintained phyext package) used indirectly by the `export.figtree` function of the SigTree package.

Details

The `export.figtree` function of the SigTree package depends on several functions in the previously-maintained phyext package. In December 2014, that package's maintainer declined to continue maintenance, and that package was dropped from CRAN. With the permission of that package's original author (Conrad Stack), the tools of the phyext package are included here.

The original phyext package can be found in the CRAN archives: <http://cran.r-project.org/src/contrib/Archive/phyext/>

Author(s)
